Background

The Supplemental Nutrition Assistance Program (SNAP) is the most effective anti-hunger program in the U.S. SNAP provides food benefits that are timely, targeted, and short-term.

The Thrifty Food Plan (TFP), created in 1975, is the cheapest of four U.S. Department of Agriculture (USDA) plans, representing the weekly cost of buying food to maintain a healthy diet. This plan determines the maximum SNAP monthly benefit based on:

- current dietary guidelines,
- food consumption data, and
- cost of food items at retailers.

The bipartisan 2018 Farm Bill directed USDA to update the Thrifty Food Plan. The resulting update in 2021 was the first in the plan's history and led to a necessary and long overdue increase in SNAP benefits. The average daily SNAP benefit increased by \$1.20 per person in fiscal year (FY) 2022.

In 49 years, the TFP has only been updated three other times — in 1983, 1999, and 2006 — but these updates did not increase the SNAP benefit amount. As a result, the 2021 update was critical to bring SNAP benefits to an adequate level. Despite this progress, SNAP benefits still do not keep pace with current food prices, falling short of what families need to help keep food on the table.

TFP's Impact in Texas

As a result of the Thrifty Food Plan re-evaluation, Texas received an additional \$1.502 billion in total SNAP benefits for FY 2022, according to [USDA estimates](#).

The following table shows the impact of the TFP update across Texas by looking at the total SNAP increase, meal increase, and jobs supported in FY 2022 at a county level.

You can view all of the data in a spreadsheet [here](#).

County Name	FY 2022 Estimated TFP Increase	Increase in Meals	Jobs Supported

Analysis provided by Dwyer Consulting for Feeding Texas, March 2024

Conclusion

In total, the TFP update brought an estimated \$1.502 billion, or nearly 483 million meals, to Texas to feed families in need. The update also helped to stimulate the Texas economy, supporting an estimated 18,006 jobs.

The 2021 TFP re-evaluation made up for five decades of shortchanging families with inadequate benefits. Future updates to TFP will not be as big as the update in 2021, since it had to account for five decades of deferred adjustments.

More adequate SNAP benefits reduce food insecurity, with long-term beneficial impacts, such as supporting economic mobility and reducing health care costs. Increased SNAP benefit levels are also associated with positive child health outcomes, including healthier weight and fewer school days missed due to illness.

More adequate SNAP benefits are good for everyone, and limiting future updates to the TFP would lead to SNAP becoming inadequate again. Evaluating the Thrifty Food Plan without adjusting the SNAP benefit ignores the reality of market rates and evolving dietary guidelines. If scientific evidence shows that a healthy diet costs more, then SNAP benefits should adjust.

Preventing or limiting future updates would lead to a cut, with SNAP once again becoming insufficient to purchase a healthy diet.

Sources & Methodology

The Texas Health and Human Services Commission (HHSC) provides monthly benefits data that were used to determine each county's percentage of total Texas SNAP benefits in FY 2022. The estimated TFP increase by county was then calculated by applying each county's share to the total \$1.502 billion estimated SNAP increase.

According to the Center for American Progress, 11,988 jobs are supported per every \$1 billion investment in SNAP because recipients spend their benefits in their local communities, with a particularly strong impact in food-related industries. This calculation was used to determine the increase in the number of jobs supported across Texas.

Feeding America's Map the Meal Gap study determined \$3.11 is the statewide average for the price of a meal in Texas.
